

# HDA800 SPB800 Evaluation Kit

## What is in the box?

In this evaluation kit you will find:

- One SPB800E
- One PC connection board
- One USB memory stick with documentation and drivers
- One USB cable to power the PC connection board
- One USB to RS232 adapter if your PC lacks a serial port

**Development tools and documentation is updated frequently. Please visit the Wiki page for oWL pico at [pico.hd-wireless.se](http://pico.hd-wireless.se) and look for an up to date versions of documentation and associated software and development tools before you begin installing this kit.**

- Start by inserting the USB-stick and open the index.html file unless it opens automatically in your web browser.
- Read the HDA800 User Manual on how to connect the PC Connection Board and how to configure the SPB800E for one of the included examples.
